SUMMARY

Full-stack and frontend developer specializing in React, Node.js, Express, MongoDB, and TypeScript who independently designs and builds original, production-style full-stack systems from the ground up — architecting database schemas, REST APIs, and React front ends — with a focus on third-party API integrations, webhook reliability, and designing for real-world failure modes.

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), TypeScript, Vite, TanStack Query (React Query), Tailwind CSS, HTML5, CSS3, Responsive Design, Nextjs

Backend: Node.js, Express.js, REST API Design, MongoDB, Mongoose, JWT Authentication, Webhook Verification (HMAC-SHA256)

AI-Assisted Development: Claude Code, Codex, Prompt Engineering

Tools & Practices: Git, GitHub, GitHub Actions (CI/CD), Docker, Postman, Vercel, AWS, VS Code, Vitest

FEATURED PROJECTS

SaaS Integration Hub — [Live Demo](#) · [Code](#) · 2026

React 18 • Vite • TanStack Query • Node.js • Express • MongoDB • Stripe • Shopify • Slack API • Resend

- Built a full-stack platform connecting payments, inventory, and delivery updates from 3+ services (Stripe, Shopify, Slack) into one automated pipeline, replacing a manual process that required checking each tool separately.
- Implemented idempotent duplicate-detection so repeated webhook events from payment providers produce zero duplicate orders or notifications.
- Automated Slack and email notifications end-to-end, designed to remove roughly 60% of manual follow-up work.
- Built a live dashboard with search and filtering that refreshes every 5 seconds, cutting transaction lookup from minutes to seconds.

Release Intelligence Dashboard — [Live Demo](#) · [Code](#) · 2026

React • Node.js • Express • MongoDB • GitHub Actions API • Sentry • PostHog • GCP Cloud Logging

- Combined 4 separate monitoring tools (CI, error tracking, analytics, logs) into a single dashboard, reducing the surfaces an engineer checks after each release from four to one.
- Designed for graceful degradation: the dashboard stays functional and preserves visibility even if one monitoring source goes down.
- Automated deployment tracking end-to-end, eliminating duplicate entries and manual note-taking after each release.
- Built a health-scoring system (healthy / watch / incident) that turns raw signals into an at-a-glance status call instead of digging through logs.

GitHub Stats Tracker — [Live Demo](#) · [Code](#) · 2026

React • React Router • Zustand • React Query • Recharts • GitHub API

- Built a React app to search GitHub users, view profile details, and compare two developers side by side.
- Charted repo and follower data with Recharts, using React Query for data caching and Zustand for state.

EDUCATION & CERTIFICATIONS

Full-Stack Web Development — Self-Directed Study, 2024–Present

Certifications: The Complete JavaScript Course 2025 (Zero to Expert) · Learn React · Learn Node.js · Learn SQL · Career Essentials in Generative AI (Microsoft & LinkedIn)

Career Break — 2013–2024

Bachelor of Engineering, Electronics & Instrumentation — SGSITS, Indore, India, 2009–2013
