SUMMARY

Full-stack developer specializing in **React**, **TypeScript**, **Node.js**, **Express**, and **MongoDB**, with AI-assisted development woven through the whole build. Designs and ships original, production-style applications with React front ends, **REST APIs**, and database schemas, all live and **cloud-deployed**. Focused on responsive UI, **third-party API integrations**, webhook reliability, and designing for real-world failure modes.

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), TypeScript, Vite, TanStack Query (React Query), Zustand, React Router, Recharts, Tailwind CSS, HTML5, CSS3, Responsive Design, Next.js, Python

Backend: Node.js, Express.js, REST API Design, MongoDB, Mongoose, SQL, FAST API, JWT Authentication, Webhook Verification (HMAC-SHA256)

Testing & Tooling: Vitest, Git, GitHub, GitHub Actions (CI/CD), Docker, Postman, Vercel, AWS, VS Code

AI-Assisted Development: Claude Code, GitHub Copilot, ChatGPT, Codex, Antigravity

FEATURED PROJECTS

SaaS Integration Hub — [Live Demo](#) · [Code](#) 2026

React 18 • Vite • TanStack Query • Node.js • Express • MongoDB • Stripe • Shopify • Slack API • Resend

- Built a webhook pipeline ingesting Stripe, Shopify, and Slack events into one flow, verifying every payload with HMAC-SHA256 to reject spoofed or tampered requests.
- Made processing idempotent with a unique-index dedupe key resulting in **100%** fewer duplicate orders.
- Normalized three vendors' payload schemas into one canonical REST model (Express) and automated Slack + email alerts via Resend, cutting **~60%** of manual follow-up.
- Added TanStack Query caching and debounced search resulting **~80%** fewer search API calls.

Release Intelligence Dashboard — [Live Demo](#) · [Code](#) 2026

React • Node.js • Express • MongoDB • GitHub Actions API • Sentry • PostHog • GCP Cloud Logging

- Unified four APIs (GitHub Actions, Sentry, PostHog, GCP Logging) behind one Express layer, handling mixed auth models (OAuth, API keys) and data shapes in a single REST contract.
- Built graceful degradation, so one upstream outage never takes the dashboard down.
- Consolidated CI, errors, analytics, and logs into one view resulting up to **~30%** less context-switching.
- Added a weighted health score (healthy / watch / incident) to replace manual log triage.

Security Posture Scorecard — [Live Demo](#) · [Code](#) 2026

React • Node.js • Express • GitHub API (Octokit) • OSV Vulnerability Database • Vitest

- Built a Node/Express engine that scans any public repo via the GitHub API (Octokit), cross-referencing dependencies against the OSV database across frontend, backend, and DB layers.
- Designed a check-plugin architecture so new checks add without touching the core engine.
- Tagged each finding verified / detected / manual to avoid overstating certainty, and backed scoring with **70+** automated Vitest tests to keep it regression-safe.
- Surfaced results in a React UI with a transparent “why this score?” breakdown.

EDUCATION

Full-Stack Web Development - Self-Directed Study, 2024-Present

Career Break - 2013–2024

Bachelor of Engineering, Electronics & Instrumentation - SGSITS, Indore, India, 2009-2013
